Sikacrete® 211

One-component, cementitious, pumpable and pourable concrete mix

Description	Sikacrete® 211 is a 1-component, portland-cement concrete containing factory blended coarse aggregate.
Where to Use	 Full depth repairs. On grade, above, and below grade on concrete. On horizontal, vertical and overhead surfaces. As a structural repair material for parking facilities, industrial plants, walkways, bridges, tunnels, dams and balconies. Filler for voids and cavities.
Advantages	 Pre-packaged coarse aggregate: Eliminates need to extend material in the field; Eliminates the risk of reactive aggregate. High bond strength. Compatible with coefficient of thermal expansion of concrete. Increased resistance to deicing salts. Simple-to-use labor-saving system. Easily mixed. Good freeze/thaw resistance. Easily applied to clean, sound substrate. Not a vapor barrier. Not flammable
Coverage	Approximately 0.65 ft.3/unit
Packaging	80 lb. multi-wall bag.

How to Use	
Substrate	Concrete, mortar, and masonry products.
Surface Preparation	Concrete: Remove all deteriorated concrete, dirt, oil, grease, and all bond-inhibiting materials from surface. Be sure repair area is not less than 1 in. in depth. Preparation work should be done by high pressure water blast, scabbler, or other appropriate mechanical means to obtain an exposed aggregate surface with a minimum surface profile of ±1/8 in. (CSP-7). Saturate surface with clean water. Substrate should be saturated surface dry (SSD) with no standing water during application. Reinforcing Steel: Steel reinforcement should be thoroughly prepared by mechanical cleaning to remove all traces of rust. Where corrosion has occurred due to the presence of chlorides, the steel should be high-pressure washed with clean water after mechanical cleaning. For priming of reinforcing steel use Sika® Armatec® 110 EpoCem (consult Technical Data Sheet).
Priming	For priming of reinforcing steel use Sika® Armatec® 110 EpoCem (consult Technical Data Sheet).
Mixing	Place 4/5 of 1 gallon water in mixing container. Add Sikacrete® 211 while continuing to mix. Add additional water up to 1 gallon total. Mix to a uniform consistency, maximum 3 minutes. Mechanically mix with a low-speed drill (400-600 rpm) and paddle or in appropriate size mortar mixer or concrete mixer.
Application	Form and pour or pump applications: Pre-wet surface to SSD. Ensure good intimate contact with the substrate is achieved. To accomplish this, material should be scrubbed into the substrate or other suitable means should be employed such as vibration of the material or pumping under pressure. Vibrate form while pouring or pumping. Pump with a variable pressure pump. Continue pumping until a 3 to 5 psi increase in normal line pressure is evident then STOP pumping. Form should not deflect. Vent to be capped when steady flow is evident, and forms stripped when appropriate.
Tooling & finishing	As per ACI recommendations for portland cement concrete, curing is required. Moist cure with wet burlap and polyethylene, a fine mist of water or a water based* compatible curing compound. Curing compounds adversely affect the adhesion of following layers of mortar, leveling mortar or protective coatings. Moist curing should commence immediately after finishing. Protect newly applied material from direct sunlight, wind, rain and frost. *Pretesting of curing compound is recommended.
Limitations	 Application thickness: Minimum 1 in. (25 mm); Maximum 8 in. (200 mm) Minimum ambient and surface temperatures 45°F (7°C) and rising at time of application. Using SikaLatex®, SikaLatex® R or similar products will result in loss of slump and slump retention. Field tests for suitability are strongly recommended.
